

Lesson 1 A – Working with Selection

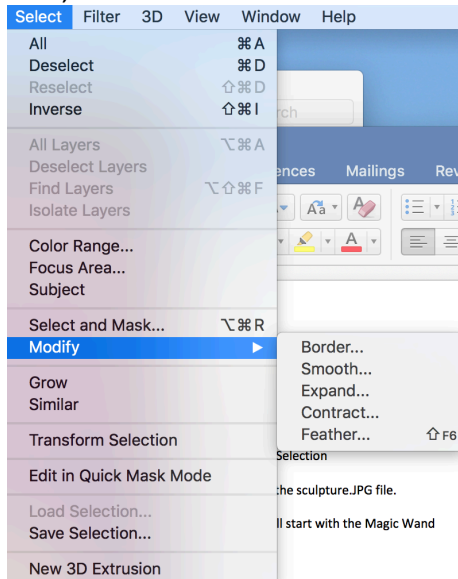

We will learn several of the selection tools.

Magic Wand

Lasso

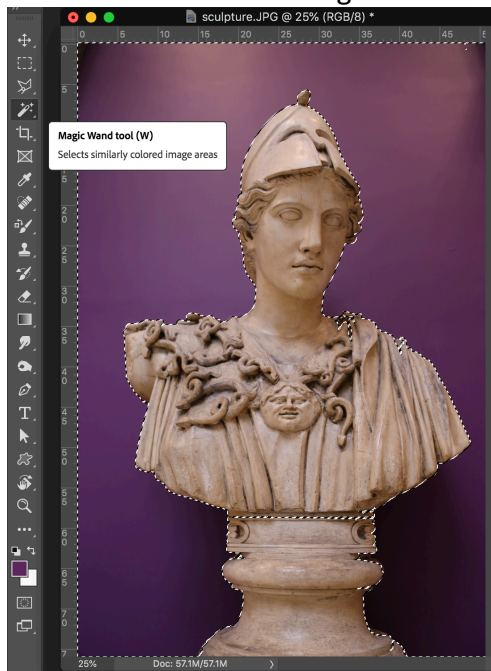

Quick Selection

Also, How to refine the selection using several of the tools under the select menu.

Open the sculpture.JPG file.

We will start with the Magic Wand

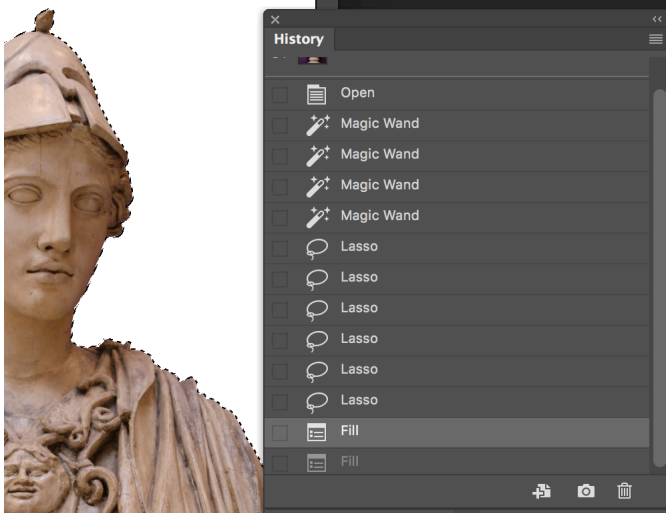

We will use shift key to add to selection
Option key to remove from selection

Zoom in and refine the section. In my example I use the lasso tool to remove areas from selection. A minus option shows when you press the option key.

Once the purple is selected we can fill in the purple with any other color or delete the area.
To fill in with color use Edit>Fill – In my case I used white

Next talk about the history menu to go back in Time.

Once you have all the purple part selected we use the Invert Option under selection to select the opposite.

I will talk about several ways to select and what you can do with selections.
